

Creating a workshop for processing Greenhouse Vegetable Products

| Project description | |
|--|---|
| Project initiator | Oleksandrivka village council |
| The essence of the project | Creating a workshop for processing Greenhouse Vegetable Products |
| Project goal | Increasing the volume of agricultural production by residents of rural areas, uniting producers in cooperatives, creating added value for vegetable products by purchasing equipment for primary processing of vegetables. |
| Compliance with strategic documents and assignation of priorities | <p>The planned activities of the project correspond to the development strategy of the Donetsk region for the period up to 2027.</p> <p>- Task 1.2.4. "Development of a modern system of agricultural products processing in accordance with market needs" operational goal 1.2. "Reasonable specialization based on knowledge and innovations" strategic goal 1 "updated competitive economy" of the Donetsk Region Development Strategy for the period up to 2027.</p> <p>Development strategies of the Oleksandrivka settlement territorial community for the period up to 2027.</p> <p>Strategic goal A. 1. "Creating an effective system of support and provision of services for business"</p> <p>Operational objective A. 2. 3 "Promotion of high-value-added agricultural production and processing"</p> |
| Study of the problem that will be solved as part of the project implementation | <p>In the community, the production of vegetable products is mainly carried out by households (more than 90%). Private farms are not able to ensure high quality and competitiveness of their products due to insufficient financial viability in comparison with enterprises, insufficiently developed infrastructure for harvesting and selling products. Products are sold at low prices, since there is no object where they can be cleaned, washed, calibrated, packaged and, as a result, sold with added value. In the future, the project will provide an opportunity for vegetable producers to encourage other agricultural producers to join cooperatives and create their own processing to get added value for products.</p> <p>The project does not require an environmental impact assessment procedure.</p> |
| The estimated cost of the project amounts to | 15000,0 thousand UAH |
| Project Implementation Arrangement | private investment, grant funds |
| Key financial indicators of the project implementation | Undefined |
| Project implementation term | 2022-2023 |
| Indicative funding sources | Investment and grant funds |

| | |
|--|---|
| to finance the project | |
| Project Implementation Arrangement | Project idea |
| Interested parties and expected result of the project implementation | Target groups: Residents of the community, a local government body. Expected results: job creation, number of operating cooperatives, availability of equipment for primary processing of vegetables. |
| Characteristics of an object (existing or newly created) | |
| Location of the object | Bezzabotivka village, Oleksandrivka village territorial community, Kramatorsk district, Donetsk region, Ukraine. |
| Description of existing objects or those that are proposed to be created as part of the project implementation | Production area, office space – 478 M2, total land area 2200 M2. It is proposed to reconstruct the premises, purchase the equipment for primary processing of vegetables. |
| Form of property | Communal, private |
| Related infrastructure | Access roads for freight transport - paved road - railway line Kramatorsk station-60 km Services - enabling construction connection points for electricity water - well, sewage system – septic tank. |
| Land area, hectare | 0.22 ha |
| Land plot status | General purpose land plot |
| Levelling of land | |
